## Fitment Guide/Instructions

As we customise each car bra to fit each particular model fitting can vary...

**The most common fitment procedure is as follows:**

Each car bra is like a second skin that goes over the car, the starting point is

- 1) Hook the bended grip at the top of the CAR~BRA on one side of the wheel arch at the highest point
- 2) Stretch across the bonnet and hook on other side
- 3) Align the CAR~BRA with the head lights, number plate and driving lights if any, then the turn wheel outward so you can get your hand behind it
- 4) Just hook 2 elastics under or beyond the front bumper bar just to keep the CAR~BRA in place
- 5) Stretch the elastics inside the black dust cover the inside the wheel arch as far as possible, if you do not have hooks with elastics you will have bendable grips – just bend grips around and inside wheel arch
- 6) Mark the area and with the smallest sharp screw driver, place a tiny hole to accommodate the metal hooks in the dust cover

7) Hook all the remainder elastics along the bottom and you are done...e-e-e-a-s-y!

8) If all else fails, **CALL US!**
